

MLP RL controller architectures used in the study

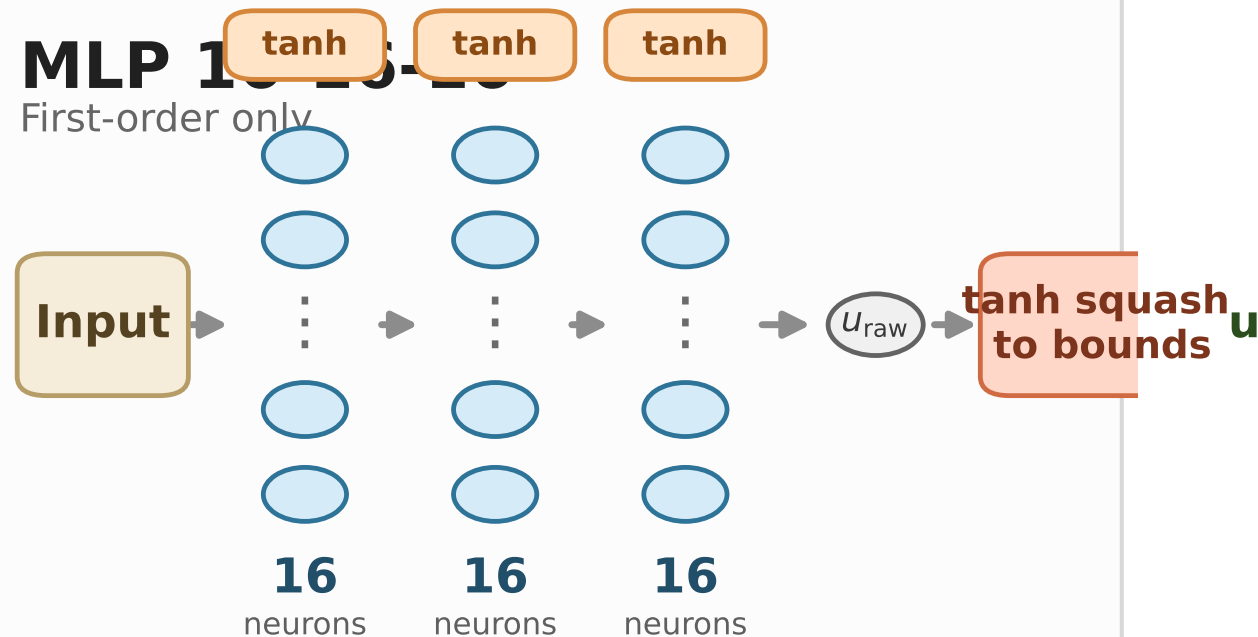

MLP 16-16
First-order + pendulum

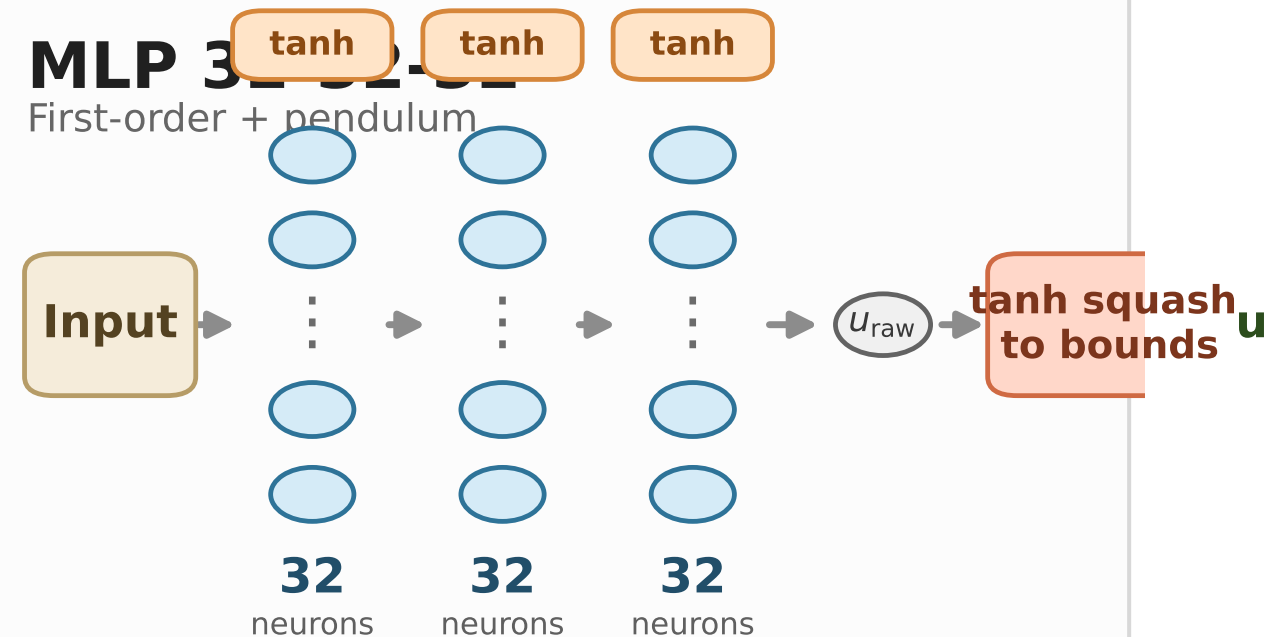

MLP 32-32
First-order + pendulum

MLP 16-16-16
First-order only

MLP 32-32-32
First-order + pendulum

Hidden layers use tanh activation. Final output is smoothly bounded via $u = \text{mid} + \text{half tanh}(u_{\text{raw}})$.
